

App Testing Feedback - Issues Found

- App Name: PramEducation
- Test Date: 29th June 2025
- Tester: Darshana Murlidhar Kadu
- Device: Android

1. Invalid Inputs Accepted – HPLC Testing Google Form:

***Issue:** The Google Form for HPLC Testing allows submission of invalid inputs:

- Name : Accepts values like 1234Dmk, which are not real names.
- Contact Number : Accepts non-numeric inputs like Abcdwf.
- Date Field : Allows selection of past dates (e.g., 01/06/2025) for sample collection, which is not practical for a future event like a medical test.

***Expected Behavior :** Form should validate that:

- Name contains only alphabets.
- Contact number is a valid 10-digit mobile number.
- Date selected should be current or future date only; past dates should not be accept...

2. No Results Shown for Multiple Search Terms – Tuition Search Module:

***Issue :** When using the search feature in the Tuition Teacher / Coach section, no results are displayed for common keywords like "Maths" and other subjects. The screen remains blank with no feedback or message to the user.

***Expected Behavior :**

- Display relevant search results for popular subjects.
- If no results are found, show a message like:

→ "No results found. Please try a different keyword or check your location."

***Suggestion :**

- Ensure backend/API is returning data for commonly searched subjects, and handle empty search results with a clear message.

Note: On some mobile devices, input is being registered one character at a time while typing in the search box, which may impact search behavior and user experience.

3. Incomplete Features Visible – Search & Admissions:

***Issue:**

- The app displays an informational banner (“Our team is racing against the clock to roll out this feature...”) across multiple screens. This results in two key problems:
- The banner blocks important UI elements, such as language selection options and coaching screen content.
- The "Search & Admissions (Schools / Colleges / Coaching)" section is clickable but leads only to this banner message, indicating the feature is not yet available.

Expected Behavior:

- Incomplete or under-construction features should be :
- Hidden or disabled.
- Or clearly marked as “Coming Soon” without allowing user interaction.

Informational banners should:

- Be non-blocking and should not interfere with interactive elements.
- Be dismissible or positioned in a way that doesn't affect usability

I have attached the relevant screenshot for your reference.

HPLC Testing Registration - Blood Warriors

High

Performance Liquid Chromatography test is used for Thalassemia screening. 2-4 ml of blood sample is collected and sent to the lab and it takes 3-7 days for the result.

This test indicates if you are a Thalassemia carrier, which will help you make a better decision in case if you are planning for a marriage or a pregnancy.

- If you are about to get married, please do a couple screening to be sure of Thalassemia status which can stop you from having a life-long struggle seeing the child go through health emergency.

- If you are planning for a pregnancy, in case if you and your partner are carriers, then gynecologist counselling will help you plan the child in less risky way.

We are currently associated with Tapadia Diagnostics for HPLC testing
